UNILUSTRE™ - ENVIRONMENTAL IMPACT

Unilustre™ is the product of Research & Development effort by **Unifoil Corporation** which surpasses the aesthetics of Metallized Polyester Film Laminations and eliminates it's non recyclability. The unique manufacturing process used for **Unilustre™** **precludes** all materials, which are normally considered non-reusable and wind up in a landfill. Although most Aluminum foil laminations utilize foil thickness in the range of only 3 ten thousands of an inch, the amount of metal in **Unilustre™** is approximately **1/100th** that an Aluminum foil (Please see attached chart). As a result **Unilustre™** can be repupled under normal Paper Mill Beater Room Conditions.

Studies conducted at the **Institute of Paper Science & Technology** in Atlanta, Georgia and at a major manufacturer of Recycled paperboard have confirm the repulpability of **Unilustre™** (Reports and Data are available upon request).
